Portfolio: layanalsayeh.github.io

Final-year BIDA student at the German Jordanian University who builds the data systems businesses run on: a full analytics and reporting platform for a multi-clinic dental practice, audit analytics at EY Forensics, and end-to-end e-commerce builds for clients. I turn scattered operational data into clear decisions, and organise the teams and processes around them.

EXPERIENCE

Project Development Manager, Analytics & Systems · Persona Dental Clinic, Amman — Sep 2024 – Present

- Designed and built a **14-module analytics dashboard** covering revenue, collections, installment plans, doctor commissions, capacity, marketing conversion and partner equity, used by management for monthly decisions.
- Rebuilt it as v2 on a **MySQL database** with role-based logins (admin, manager, viewer) and a **Power BI** model; consolidated ~1,900 patient records from Excel exports and deployed it on the clinic's server.
- Built automated **data-quality checks** that flag missing payments, overdue installment plans and duplicate leads, so issues reach the right person before month-end.
- Identified discount approvals and overdue-installment follow-up as the highest-impact areas for decision support; now scoping a patient portal for bookings, balances and installment payments with the IT team.

Data Analytics Intern, Forensics & Integrity Services · EY, Amman — Jul – Sep 2026

- Built an Excel **red-flag tracker (~300 findings)** with an automated reference system (INDEX/MATCH) for a vendor audit red-flag assessment.
- Classified a banking client's contract register into six document types and linked each document to its parent agreement with lookup formulas.
- Built an **82-slide client proposal** for a crisis and emergency management engagement (ISO 22361 / ISO 31000), structured into five phases over 13 weeks.
- Drafted the audit report template and a findings deck summarising the major red flags for the engagement team.

Founder & Shopify Developer · Layan Digitals (freelance) — Sep 2026 – Present

- Scoped, priced and delivered a client's online store end to end: brand identity, theme, product catalogue, policies, local payments (CliQ and card) and delivery setup.
- Modelled the client's running costs (platform fees, payment processing, delivery, tax) so she could set profitable product prices.

Marketing Intern · TruTed, Amman — Jun – Aug 2024

- Analysed campaign data to shape ad targeting; created content and supported SEO.

PROJECTS & AI AUTOMATION

- **AI agent operations system:** designed AI agents that run recurring work on their own: a budget agent that categorises monthly bank statements with learned rules, a daily briefing that triages email and deadlines, and a planning coach connected to Notion.
- **Wardrobe web app:** full web app with a database, an image-processing pipeline that cuts garments out of photos, and an AI stylist that recommends outfits from owned pieces.
- **Venture planning:** business plans and financial models (break-even, P&L, sensitivity) for marketplace and subscription concepts in the Jordanian market.

> **1st Place, University Pitch Competition** · *Serenity*, an inclusive startup concept combining orthopaedics, fashion and AI.

EDUCATION

B.Sc. Business Intelligence & Data Analytics

German Jordanian University · 2023 – Present

- ERP (SAP), E-Commerce, Data Analysis, Data Mining & ML, E-Supply Chain
- Bachelor's thesis: student-finance app (2026–27)
- German Year in Germany (study + internship) from 2027

SKILLS

Data & BI	Excel (lookups, pivots, trackers), SQL / MySQL, Power BI, dashboard design, data cleaning & validation
Systems	Shopify, Notion, SAP (coursework), HTML/JS dashboards, PHP basics
AI	AI agents & automation, prompt engineering
Business	Business planning, financial modelling, pitching, client management
Languages	Arabic (native), English (fluent), German (B1)
